## Top Skills

Remote Sensing  
Unstructured Data  
Model Development

## Certifications

Statistics for Data Analytics  
Road to Data Engineer Graduate  
Deep Learning Computer Vision™  
CNN, OpenCV, YOLO, SSD & GANs

# PRAHYAT PUANGJAKTHA

PhD Student | Remote Sensing & Data Science | Studying  
Technology for Environmental Sustainability and Disaster  
Nakhon Pathom, Thailand

## Summary

I am a PhD Student passionate about using data to understand environmental challenges. My work focuses on the intersection of Environmental Science and Data Science. Currently, I am studying to apply AI and Remote Sensing for Environmental Challenges and Disasters. I am driven to produce research that translates into actionable insights for environmental management in Thailand. I am always open to connecting with fellow researchers, data scientists, and environmental professionals.

## Experience

### Mahidol University

PHD Student

August 2025 - Present (10 months)

Nakhon Pathom, Thailand

### Freelance

Data Engineer | Data Scientist | Machine Learning Engineer

February 2024 - December 2025 (1 year 11 months)

### SYNAPES Thailand

Software Developer

August 2020 - October 2020 (3 months)

Chiang Mai, Thailand

this company work with Artificial intelligence(AI), Machine Learning(ML) and Deep Learning problem. create software that solves any problem by particular AI, ML, or Deep Learning techniques. I work in computer vision part that uses YOLO detection to detect something in image.

### National Astronomical Research Institute of Thailand

Software Programmer

August 2019 - October 2020 (1 year 3 months)

Chiang Mai, Thailand

Narit is institution that studies about astronomical. I created classify program that Identifying and characterizing variable stars using template fitting. Program will find a period that convert julian date of data to phase perfectly and use phase and magnitude fitting data with templates. After that, program will return fitting error score of all templates. Finally, compare all fitting error then save data and plot graph of best template that have smallest fitting error score.

## GISTDA (Geo-informatics and Space Technology Development Agency)

Software Engineer

June 2019 - July 2019 (2 months)

Chon Buri, Thailand

GISTDA is a company that works with space areas. GISTDA use some satellite information to detect flood areas and others. In addition, GISTDA have ground segment. So, I study protocol that satellite use for communicate between satellite and ground station. These protocol are Auto picture Transmission (APT) and Amateur Packet-Radio (AX.25). For AX.25 protocol, I made software that communication with raspberry pi through Wi-Fi and data in communication is format of AX.25. this software simulates how satellite communicates with ground segment. addition, for APT protocol, I made software that can transform a signal from NOAA satellite to image.

---

## Education

Mahidol University

Master's degree, Computer Science · (August 2021 - July 2023)

Chiang Mai University

Bachelor's degree, Computer Science · (August 2016 - May 2020)
